Abstract of JP 2001286478 (A)

PROBLEM TO BE SOLVED: To provide a system for aneurism embolization which makes embolization of the opening part to the vessels of aneurism easy to complete, with a simple structure suitable for being inserted into blood vessels.

SOLUTION: This device is a medical device arranged in a prescribed place in a blood vessel of human body and a foldable device for embolization which is sent into a prescribed place in a blood vessel through lumen of catheter and escapes the catheter in a prescribed place in a blood vessel to embolize the obstacles such as aneurysm.
